

Dexamethasone Injection 2 mg/mL

Dexamethasone Injection 2 mg/mL is indicated for the treatment of primary bovine ketosis and as an anti-inflammatory agent in the bovine and equine species.

As supportive therapy, Dexamethasone Injection may be used in the management of various rheumatic, allergic, dermatologic, and other diseases known to be responsive to anti-inflammatory corticosteroids. May also be used intravenously as supportive therapy when an immediate hormonal response is required.

Benefits:

- Synthetic analogue of prednisolone - similar but more potent anti-inflammatory.
- Offers enhanced anti-inflammatory effect compared to older corticosteroids.
- Lower dosage required than that of prednisone and prednisolone.
- Intravenous (IV) or Intramuscular (IM) Injection

Formulation & Packaging:

- Each mL contains:

Dexamethasone.....	2 mg
Polyethylene glycol 400.....	500 mg
