

GentaMax[®] (Gentamicin)

Indicated for the control of bacterial infections of the uterus (metritis) in horses and as an aid in improving conception in mares with uterine infections caused by bacteria sensitive to gentamicin.

Benefits:

- *In vitro* antibacterial activity has shown that gentamicin is active against most gram-negative and gram-positive bacteria isolated from domestic animals.
- Studies in man indicate that recommended doses of gentamicin produce serum concentrations bactericidal for most bacteria sensitive to gentamicin within an hour after intramuscular injection; concentrations last for 6 to 12 hours.

Formulation & Packaging:

- Each mL contains:
 - Gentamicin Sulfate equivalent to 100 mg gentamicin base
 - Sodium Metabisulfite 2.4 mg
 - Sodium Sulfite, Anhydrous..... 0.8 mg
 - Edetated Disodium 0.1 mg
 - Benzyl Alcohol as Preservative..... 0.2 mg
 - Water for Injection.....q.s.
- 100 mL & 250 mL multiple-dose vials

Dosage:

- 20-25 mL solution per day for 3-5 days during estrus. Dilute each dose with 200 to 500 mL of sterile physiological saline before aseptic uterine infusion.
- See product insert for additional information.
